### AND NOW INTRODUCING

**littleSTEPS™** GAIT PLATES

For significant toe-in/out condition.

### Celtic Orthotics based in Ennis Co Clare, is Ireland's newest Foot Orthotic Supplier.

With over 13 years of experience providing clinical education, building and repairing orthotics, and providing diagnostic equipment to assist Practitioners, we are excited to launch our own brand of Celtic Orthotics here in Ireland. We manufacture custom made products for Prescribers, and accept pressure scans, 3D Scans, Moulds and casts from practitioners throughout Ireland, the UK and Scandinavia. Our custom made orthotics are not only incredibly accurate but durable as well.

Our orthotics are manufactured by hand by our team of skilled technicians. They are cut from high grade polypropylene to any shape and any thickness with precision engineering, ensuring accuracy. All of our orthotics are finished by hand.

The devices control the rate and speed of foot pronation while at the same time rehabilitate the intrinsic muscles of the foot. We also supply a wide range of best in class off the shelf orthotics and insoles to prescribers from our headquarters in Ennis, Co Clare.

We aim to lead the industry in product quality and also in clinical support and expertise. Our clinical back up service is second to none and our lecture series is extensive and research-based.
